

*Eliminator Track is the
perfect system for remodels*

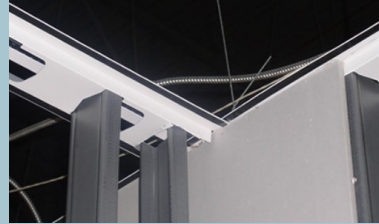

*Quickly install a
finished drop ceiling
edge and a partition
wall anywhere you
need without the
hassle of requiring
multiple trades on the
job; delivering
professional results
time and again with
seamless effort.*

Accessories

Eliminator Track offers 3 outside caps:

- Outside 90° corners
- 135° corners
- End Caps

Proudly manufactured from U.S
Steel in Princeton MN

PRECISE / VERSATILE / PROFITABLE

Eliminator Track™
FRAMING IN A SNAP™

The original wall to ceiling solution since 1985

- *Precision Layout*
- *Design Versatility*
- *Value Engineered for
Maximized Profitability
and Time Savings*

BUILT-IN ACOUSTIC CEILING EDGE

The exposed lip of the Eliminator Track provides a built in wall molding at the ceiling/wall intersection. This makes each room's ceiling look individually installed even though it's part of an overall acoustic ceiling grid system.

Addition by Process of Elimination

With the Eliminator Track wall system, value engineering is the name of the game. Our "Framing in a Snap"TM technology allows you to apply multiple processes in a less steps and eliminate the time projects require.

Holes in the Eliminator Track fit 20-25 gauge 2-1/2" , 3-5/8" studs & are punched out every 8" O.C. for simplicity of specification and measuring of walls. Saving you time and mistakes.

Eliminator Tack wall to ceiling system

FRAMING IN A SNAP!

SIGNIFICANT TIME SAVINGS WHEN BUILDING PARTITIONS

- Building partitions with Eliminator Track allows studs to be snapped into place at the top; reducing the labor of climbing ladders continually to attach studs into place.
- No need to cut studs to fit a wall either because the floors are not level. Space above the Eliminator Track allows for variances or even allowing for the building of a firewall if specified.
- Reduction of labor in multiple trades: Framing, A.C.T. Installation, Drywall, Electricians (snaking wires through open holes in ET) and even painters!

**OVER 30 YEARS OF AVG.
SAVINGS OF 30% IN LABOR**

TAX DEPRECIATION BENEFITS! ELIMINATOR TRACK AS A DEMOUNTABLE WALL DESIGN

The Eliminator Track wall to ceiling system allows architects imaginations soar with its simplicity of building process. Eliminator Track can qualify as a demountable wall, which allows to ***depreciate the entire wall build in just 7 years!***

Look of permanence

- Most demountable wall systems are composed of panels which gives the walls a segmented look. Since the Eliminator Track wall system is designed using standard components the finished wall has a smooth, solid look. The result is a firm and stable acting wall that can be dismantled and/or relocated easily.

Lower Installation costs

- Because the Eliminator Track demountable wall design utilizes standard drywall components and construction methods, there's no need to purchase expensive specialized parts, panels and equipment often required of other demountable walls systems

Faster than standard drywall framing

- The key factor is using Eliminator Track as the top track. With the Eliminator Track, stud locations are pre-measured; eliminating error in stud layout. Studs can be snapped "into" and "out of" position, so there is no need for screws or fasteners. The result is reduced framing time in both assembly and relocation.
